December 2, 2011

To Whom It May Concern:

Niagara LaSalle has no way through our processes to introduce radioactivity in the cold finish steel products we manufacture. Niagara LaSalle does not produce hot rolled steel but rather purchases hot rolled bars and coils of varying shapes and sizes from a number of hot mill sources and these products are used as raw material for our final products. We have requested information regarding radioactive materials from our suppliers and they have informed us that they have procedures and equipment in place to certify that the raw materials used in their production processes do not contain radioactive materials.

To the best of our knowledge, no radioactive materials are present in any product Niagara LaSalle Corporation offers for sale.

Should you have any questions or require additional information, please contact your local Niagara LaSalle Corporation representative.

Sincerely,

A handwritten signature in black ink that reads "Michael Salamon". The signature is written in a cursive style and ends with a long horizontal line extending to the right.

Michael Salamon
VP Quality and Assurance & Technology
